

## Anti-Human TIE-2, bt (#tek16) (MAB)

Synonyms: TEK, TIE2, VMCM, TIE-2, VMCM1, CD202B

*PLEASE NOTE: ALWAYS CENTRIFUGE VIAL BEFORE OPENING*

### Description

Tie-1/Tie and Tie-2/Tek are receptor tyrosine kinases with unique structural characteristics including two immunoglobulin-like domains flanking three epidermal growth factor (EGF)-like domains, followed by three fibronectin type III-like repeats in the extracellular region, and a split tyrosine kinase domain in the cytoplasmic region. Tie-2 is involved in vascular stabilization and remodeling. Although less well understood, Tie-1 may also act as an ANG receptor, possibly in complex with Tie-2. Human Tie-2 cDNA encodes a 1124 amino acid (aa) residue precursor protein with an 18 residue putative signal peptide, a 727 residue extracellular domain and a 354 residue cytoplasmic domain. Tie-2 is a receptor for the angiopoietin (ANG) family: ANG-1, ANG-2, and ANG-3 (mouse)/-4 (human). Ang-2 has been reported to act as an antagonist for Ang-1. Mice engineered to overexpress Ang-2 or to lack Ang-1 or Tie-2 display similar angiogenesis defects.

- **Source** Mouse
- **Isotype** IgG1
- **Clone** AB-uf127

### Biological Activity

FACS analysis and cell sorting: Use at 2-5 µg/ml.

### Reconstitution

Centrifuge vial prior to opening. Reconstitute in sterile water to a concentration of 0.1-1.0 mg/ml.

**Usage:** For research use only. Not for use in diagnostic or therapeutic procedures. Not for human use.

---

\*The Buffer may vary depending on the Lot #. Please contact our technical support if you have specific requirements.
